

CSS Assignment

1. Create a home page for some company. Page should contain a table with details as below:

First cell should have the image of Company, on top of the image there must be some details (text) about company. Left most cells should contain the links to different pages. Right most cell should have some images for advertisement purpose. Clicking on those adds should open the related page in a different window. Cell1, Cell2 and Cell3 should have details about company's different sections

.Cell 4 should display latest news about the company, which should be scrolling from top to bottom within the cell. Cells 5 to 9 should display different images of company events.

Company logo (Image)					
Links to Different page	Cell 1	Cell4	Cell5	Cell8	Images for advertisements.
	Cell2		Cell6		
	Cell3		Cell7	Cell9	
Company Address and Contact details					

2. Create a web page displaying your resume. Use appropriate headings, paragraphs and text styles.
3. Create a sample web site for a book. First page should be the home page for the book with some image and details like title, author etc. Down below there should be a link to take you to the next index page. Here you should display chapter number with name of chapter. Every chapter must have some sub topics. Clicking on the chapter you should go to the specific chapter's page and clicking on the particular topic should take you to the topic within the chapter. Every page should provide link to index page.
